

# Discussion dosimetry methods

- Discuss how we can use temperature change to estimate the dose, and the pros and cons with calorimetry
- Discuss the key principles utilized in thermoluminescence dosimetry. Why do we pre-heat the TL crystals prior to read-out, and why do we “anneal” them after use? What is TL-supralinearity?
- Discuss the principles of EPR dosimetry. What are the main limitations?
- Discuss two different film dosimetry methods
